

ARMOUR GUARD

High level Stab, Spike and Handgun Ballistic Protection for RHIB Tubes

Park It Here Products Ltd is pleased to announce the launch of a unique product that offers high levels of protection for RHIB tubes for special operations such as Pirate Interdiction and boarding operations. Armour Guard is a soft armour system has been designed to offer clients a retro-fit-able protection system that can be added or removed to a RHIB tube, as and when required for special operations where a threat to tubes is likely.

Armour Guard is very lightweight, not affected by water ingress and will protect the boat tubes to the highest levels of stab, spike and hand gun standards.

Armour Guard comes with an anti slip tread pattern to assist in boarding operations and is designed to have a tight fit to the tubes like a second skin, as it has excellent flexibility and a very slim profile.

Fitment is made easy with heavy duty Q-snap fixings or more permanent locking nuts to both the hull and deck. This means it can be fitted, to suit operational requirements, and removed when not required for normal operations.

The armour is secured inside a sandwich of very durable Polyurethane materials which have exceptionally high abrasion resistance. The armour is encapsulated via HF welding and sealed to fit the required radius of each boat tube.

Armour Guard can also be manufactured to accommodate the various fittings normally found on RHIB tubes such as hand rails, lifelines and stowage pouches etc.

The Armour Guard system provides an unrivalled level of protection to RHIB tubes, thereby avoiding tube damage that results in vessels being taken out of service and extending service life.

Additionally, logo's, identification labels and branding can be easily added to the Armour Guard.

Prices depend upon coverage of Armour and complexity of patterns, taking into account tube fittings.

Standards

Armour Type	Protection Level	Optimum Panel size	Overall Thickness	Weight KG m2
Armour Guard	HG2-KR2-SP2	2900mm x 1300mm	18mm	9.8kg
